

Presentation Show Case Video Idea(Tan):

DEFINE

PROBLEM:

Campus problem, poor communication with students...bombarded email w/ student life (from all sources, academic, athletic)

Students must go to diff place to find the answer. Making the student misses important email notification from campus.

Too much email it creates an overwhelming sensation and making the student don't want to check their inbox again.

Want a multi-platform application that supports both IOS & Android.

SOLUTION:

a one stop app to go see all thing on campus. For ex: what's for lunch, what is on sale at the bookstore...etc.

An apps that will prove students with just the crucial information that the student think they would need.(Survey on what they want on the app is from Tabor provided.

React Native Framework (IOS & Android)

PROGRESS for (Front-End):

As far as front-end go, we have accomplished research requirements such as, the app requires it to be a multi-platform. Using React Native frameworks will provide a solution to multi-platform. (IOS & Android)

Deciding what languages to use (JavaScripts).

Created a flow chart for the Front-End.

Created a Wireframe of how the mobile application will look like.

In progress of making a Mockup/Prototype...and get it approved.

Suggestions:

Since above I define the PROBLEM, SOLUTION, and Progress

- We can make a PPT slides over those w/ combined idea
- Or Video scribes about it.
- Voice over would be a thing or using an AI to do it.
- Either way we have to make a PPT slides 😊
