Week goals:

This week goal is to have my Wireframe ready to compare with Tan's Wireframe and Fitri's Wireframe. Then merged everyone Wireframe into a best final Wireframe to present to the team, also with Sponsor.

Work notes:

I am hand drawing out my own Wireframe to show to Tan and Fitri. I am able to use the Figma, but I am having some network connections with Figma. So, I end up drawing on my Ipad. I also attach my Wireframe in another PDF.

Workplace:

Tan and I meeting up after class on Friday to discuss and merge both of our Wireframe together. Also, while merging we reinvent some of our ideas into a better one. For example, our sponsor wants to have bookmark function on the app. We are planning to have every links that Tabor College is currently having to all put them into the bookmark function and let users decided which bookmark should they want to star or put in favorite.

Goal for next week:

After done with the Wireframe Tan and I are creating some tasks on Trello for our next plan for next week. We are planning to have our mockup/prototype partially done. And ready to present it to our Sponsor.
